

## METHOD AND SYSTEM FOR VERIFYING A CLIENT REQUEST

Abstract of the Disclosure

5

A system and method are presented for authorizing execution of requested actions transmitted between clients and servers of a data processing system. The method includes receiving a message including a set of actions and simulating execution of the set of actions. A list representing allowable actions and user-definable inputs to the simulated actions is defined.

10

The list of allowable actions and user-definable inputs to the allowable action is then compared to user-requested actions and inputs. When elements within the user-requested actions and inputs are included in the allowable actions and input list, the user-requested actions and inputs are authorized for execution.
